EMS Group:

Expansion of Performance Polymers at Domat/Ems Site

The EMS Group is to push ahead with its chosen strategy of concentrating on performance polymers and plans to invest some CHF 40 million in expanding the Domat/Ems site (canton Grisons, Switzerland) next year. Two large-scale polymerisation plants are planned - both will be configured especially for the production of new high-barrier materials.

In connection with this investment, EMS-CHEMIE AG, which belongs to the EMS Group, has reached an agreement about working hours at the Domat/Ems site with its social partners, the SYNA trade union and the factory committee. Introducing flexible annual working hours and increasing normal working hours to 43 hours a week will help to ensure efficient operations at the Domat/Ems site into the future.
